PROJECTS

Blood Bank Management — Build using Html and php

Blood Group Management web page is to swiftly retrieve and display donor profiles based on blood groups, ensuring efficient access to information for emergency blood transfusions

Mental Health Prediction — Build using Machine learning Html and Flask

We created a website to help doctors diagnose emotional conditions like PTSD and depression. It uses a chatbot, voice, and video analysis tailored to age groups for accurate emotion detection. A report is generated and sent to doctors for diagnosis

SKILLS

Python Programming

SQL Programming

Web Development

Machine learning
